1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Francis L. Dunn, Jr. on September 25, 2008.
3. The application has been amended as follows:

**In the claim:**

39. A computer ~~readable~~ storage medium having computer executable instructions stored thereon to facilitate document retrieval and/or indexing comprising:

return at least one stored image of an electronic document to a user based at least in part upon topological word properties of at least one captured image corresponding to the electronic document; and

an iterative comparison of a portion of a signature associated with the at least one captured image with corresponding portions of signatures respectively associated with the at least one stored image and excludes each stored image whose signature does not match the signature of the at least one captured image to facilitate identification of a match to the electronic document,

wherein the portion of the signature associated with the at least one captured image and the portion of the signatures respectively associated with the at

least one stored image that are compared become progressively smaller with each iteration, where one or more iterations are performed until a predetermined threshold number of signatures associated with the at least one stored image remains, wherein the topological word properties comprise at least width of respective words,

wherein the portion of the signature associated with the at least one captured image is based at least in part on topological word properties of a corresponding portion of the at least one captured image, and the portion of signature associated with the at least one stored image is based at least in part on topological word properties of a corresponding portion of the at least one stored image,

wherein each portion of a signature respectively associated with a stored image is a hash table that contains a plurality of table locations where a respective value corresponding to a respective segment of the stored image is entered into a respective table location for each segment of the stored image, and

wherein the portion of the signature associated with the captured image is a hash table that contains a plurality of table locations where a respective value corresponding to a respective segment of the captured image is entered into a respective table location for each segment of the captured image.

40. A computer readable storage medium having a data structure thereon to facilitate document retrieval and/or indexing comprising, the data structure comprising:

a component that receives image(s) of at least a portion of a printed document;  
and

a search component that facilitates retrieval of an electronic document, the electronic document corresponding to the image(s) associated with the printed document, the retrieval based at least in part upon corresponding word-level topological properties when comparing the image(s) associated with the printed document and generated image(s) of the electronic document, the word-level topological properties comprise at least width of words; and

a comparison component that is associated with the search component and iteratively compares a portion of a signature associated with the received image associated with the printed document with corresponding portions of signatures respectively associated with the generated images and excludes each generated image whose signature does not match the signature of the received image to facilitate location of a match to the printed document,

wherein the portion of the signature associated with the received image and the portion of the signatures respectively associated with the generated images that are compared become progressively smaller with each iteration, where one or more iterations are performed until a predetermined threshold number of signatures associated with generated images remain,

wherein the portion of the signature associated with the received image is based at least in part on word-level topological properties of a corresponding portion of the received image, and portions of signature respectively associated with the generated images is based at least in part on word-level topological properties of corresponding portions of the generated images,

wherein each portion of a signature respectively associated with a generated image is a hash table that contains a plurality of table locations where respective value corresponding to a respective segment of the generated image is entered into a respective table location for each segment of the generated image, and

wherein the portion of the signature associated with the received image is a hash table that contains a plurality of table locations where a respective value corresponding to a respective segment of the received image is entered into a respective table location for each segment of the received image.

**REASONS FOR ALLOWANCE**

4. Claims 1-41 are allowable in light of the applicant's arguments and in light of the prior art made of record.

***Reason for Indicating Allowable Subject Matter***

5. The following is an examiner's statement of reasons for allowance: Upon searching a variety of databases, the examiner respectfully submits that "wherein each portion of a signature respectively associated with a generated image is a hash table that contains a plurality of table locations where respective value corresponding to a respective segment of the generated image is entered into a respective table location for each segment of the generated image, and wherein the portion of the signature associated with the received image is a hash table that contains a plurality of table locations where a respective value corresponding to a respective segment of the received image is entered into a respective table location for each segment of the received image" in conjunction with all other limitations of the dependent and independent claims are not taught nor suggested by the prior art of record. Therefore, all pending claims 1-41 are hereby allowed.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issues fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
